My Stake Friends — Administrator Guide

"Hearts Knit in Unity"

⚠ **The golden rule:** ALL administration happens on the website — **mystakefriends.com**. The mobile app is **only** for members participating in circles. Signing in to the app will not show any admin tools; in the app, you are simply a member of your own circle.

1 Sign in on the website

Go to **mystakefriends.com** on any computer or tablet and sign in with your admin email and password. Use the **English | Español** switch on the login card to change language at any time.

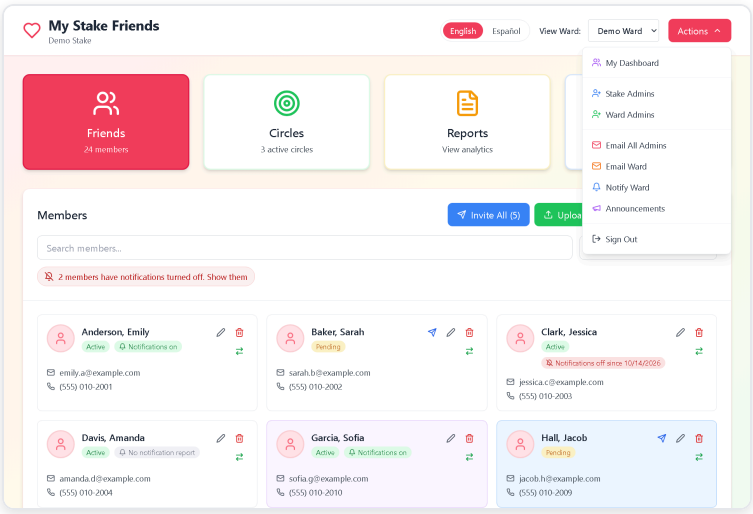

2 Know your dashboard

Everything lives in two controls at the top:

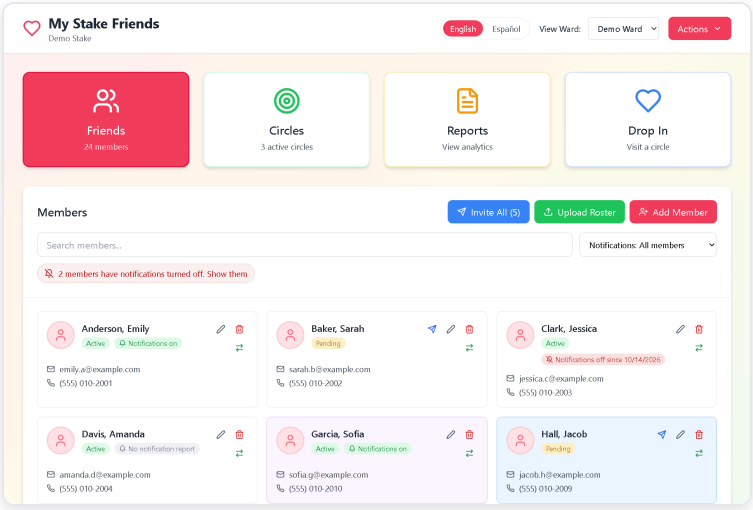

- **View Ward** — switch between all wards or focus on one. Most actions apply to the ward you are viewing.
- **Actions menu** — admins, email, push notifications, announcements, and your own member view.

The tiles switch between **Friends** (your member list), **Circles** (the circle builder), **Reports**, and **Drop In**.

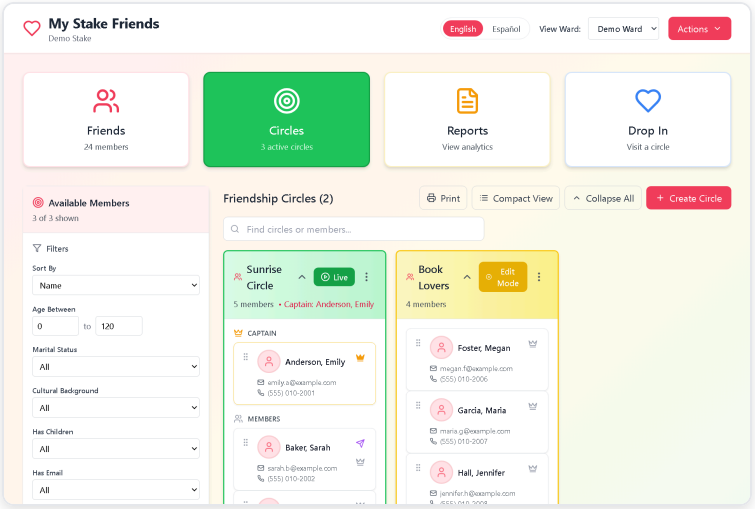

3 Add your members

- **Upload Roster** — import an LCR export (Excel/CSV). Map the columns, choose whether the roster is **Female or Male** members, and import.
- **Add Member** — add one person quickly. **Every member needs their own email address** — spouses must not share one.
- **Invite All** — emails everyone who has never logged in. The invite has them **set a password on the website first**, then download the app.
- The **bell badge** on each card shows whether that member's phone has notifications on or off.

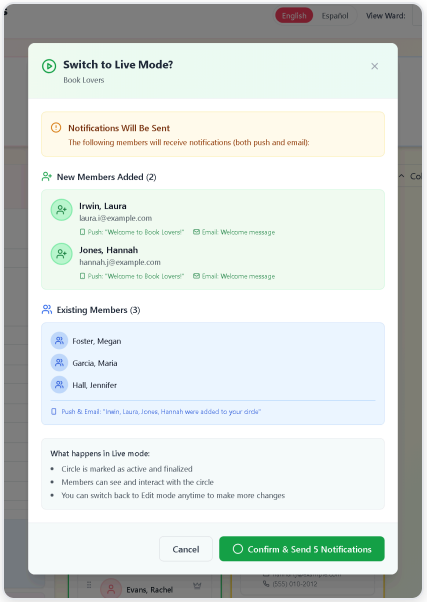

4 Build friendship circles

- Open **Circles** with a single ward selected, then **Create Circle**.
- **Drag members** from Available Members into circles; drag back to remove.
- Click the **crown** on a member to make them circle captain.
- Use filters (age, marital status, has email) to plan balanced circles.

5 Go Live when you're ready

Circles start in **Edit Mode** — invisible to members, so you can rearrange freely. Clicking **Go Live** shows exactly who will be notified (push + email) before you confirm. You can switch back to Edit Mode anytime; removed members are never notified.

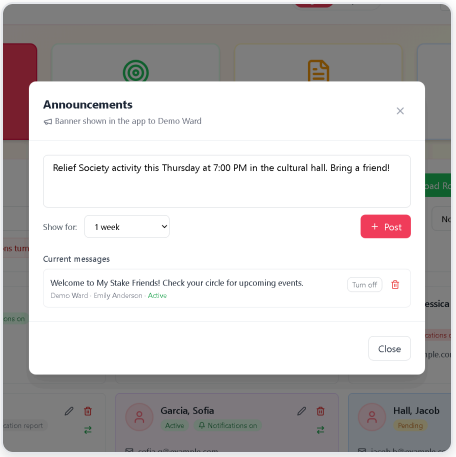

6 Communicate

- **Announcements** — a banner members see when opening the app; set how long it shows, optionally with a push.
- **Notify** — instant push notification to the ward or stake.
- **Email** — email a circle, a ward, the stake, or all admins.

7 Drop In

Visit any circle's chat and activities temporarily to say hello — one circle at a time. Anything you post stays after you leave, labeled with your name.

Troubleshooting

- **"I can't log in to the app"** — they must first open their invitation email and set a password **on the website**. No invite? Send one from their member card.
- **App says "Not assigned to a circle yet"** — the app only works for members placed in a **Live** circle. Add them to a circle and go Live.
- **"I don't get notifications"** — check the bell badge on their card. **Off** means their phone is blocking them: in the app they'll see a banner with an **Open Settings** button. "No report" means they need the latest app version.
- **Password reset** — open the member's card → Reset Password sets a new one instantly (no email is sent — tell them the new password).
- **Couples sharing one email** — each spouse needs their own email address, or their accounts will collide.
